

iControl

iControl Putting YOUR website in YOUR control...Integrous iControl is a highly customisable, scalable Content Management System (CMS) that allows your organisation's employees, partners, and clients to access, manage and create content and information from any Internet-enabled computer through a simple to learn, non-technical user interface.

Key Business Benefits: Easy to install - You can install iControl with a click and run installer, and have a content management system running on your computer in just a few minutes.

Easy to use - Our developers have made iControl easy and attractive for content managers to add, update, and maintain content.

International - The iControl interface has more than 40 translations, and tools exist for managing multilingual content.

Compliant - iControl carefully follows standards for usability and accessibility. iControl pages are compliant with the W3C's AAA rating for accessibility.

Cost effective - There is no licensing model all you pay for is the product itself and the work you require to tailor it to your specific requirement.

Supported - There are close to a hundred developers in the iControl Development Team around the world, and a multitude of companies that specialize in iControl development and support.

Extensible - There are a multitude of add-on products for iControl to add new features and content types. In addition, iControl can be scripted using web standard solutions and Open Source languages.

Technology neutral. iControl can inter-operate with most relational database systems, open source and commercial, and runs on a vast array of platforms, including Linux, Windows, Mac OS X, Solaris and BSD.
