

iData PDA

iData PDA

Effortless remote data management...

iData PDA from Integrous gives you the ability to remotely capture data in real time from any event, anywhere in the world – in just 12 seconds!

iData PDA is a mobile electronic data capture solution that combines the use of Personal Digital Assistants (PDAs), a GPRS or WiFi network and your interaction with prospects, clients, suppliers or customers to deliver data to your chosen location virtually instantly. iData PDA will eliminate days of time from your data processing – abolishing the painful transcription of hand-written notes whilst simultaneously improving the quality of your data. It also enables live monitoring of events regardless of geographic location. iData PDA is easily configured and adapted for multiple events and provides for safe transactional data, even in the event of a flat battery. Using straight-through processing technology, data can be provided in XML, CSV or even delivered seamlessly to your back office systems.

Key Business Benefits:

Improved Data Quality – Eliminates the use of hand-written paper-based forms to process data quickly and efficiently.

Reduced Costs – Remove the need for form printing and the necessary days to have their contents manually entered into your systems.

Real Time Efficiency – Enables users to capture data instantly, eradicates duplication and errors and queries can be answered rapidly.
